

## In The Beginning

Read the following passage carefully.

---

Our Solar System was created millions of years ago. There are many theories about how our planet Earth was actually formed. One common idea is that spinning gas and dust was created in an explosion. Eventually, the whirling particles came together to become the planet that we call home.

Our planet is unique because it is the only planet known to have life on it. "Prehistoric" means "before written history". We have learned about prehistoric times, and early life forms, from fossils. Fossils are the remains of dead plants and animals found in rocks.

There are still pieces of the puzzle missing. Scientists are continuing their search for the story of our origins.

---

1. What word in the passage means **blast**?

---

2. What does **unique** mean?

---

3. What word in the passage is synonymous with **theory**?

---

4. What does the prefix "pre" mean in **prehistoric**?

---

5. What **two** words in the passage above mean **made**?

---

6. What word in the passage is an **antonym** of dead?

---
